Chapter 7
Qualitative Migration Research: Viable Goals, Open-Ended Questions, and Multidimensional Answers

Eva Moravcsik

In the first part of this chapter, I review the epistemological premises informing qualitative investigations of international migration, identify the main research goals that can be pursued through this approach, briefly note relevant strategies of data collection and analysis, and suggest how best to present the results of qualitative studies. Drawing on the framework thus created, in the second part, I offer examples of the kinds of questions raised through the standard methods of qualitative investigation (interviewing, observation, and document analysis) in the examination of some of the existing and emerging problems that currently preoccupy scholars in the field of international migration studies. They include the decision-making process of potential cross-border travelers, transnational migration and the host society, and the role of super-diversity/multiculturalism in immigrants' everyday lives.

7.1 The Main Premises, Goals, and Strategies of Qualitative Research

Qualitative research in the social sciences in general and, of course here, in investigations of international migration, traditionally aims to reconstruct people's everyday experience, both the inner and outer aspects of it, with the meanings those social actors attach to their situations and practices. It pays heed, in other words, to what the Polish sociologist Florian Znaniecki (1882–1958), under whose guidance and I was trained in social research methods at the University of Warsaw, called the "humanistic coefficient." Because social facts are created by social actors, Znaniecki
